Flat & Scroll 2.

Bootstrap Theme.

A beautifully crafted Bootstrap 3 One Page Theme.

Contents.

THANK YOU FOR THEMING WITH ALVAREZ.

I honestly appreciate your support & trust in my work. I bow to you and your next Bootstrap adventure. Good luck & have some fun!

Alvarez

1. THE INSTALL

A few words on getting started with your newest Bootstrap project, package files & theme support.

1.1 Included Files

After downloading the theme package open the folder named "FS2 Theme (Version)" and un-zip the folder, if it is not already so. Inside the package you will find the following files:

1. Theme-vX.X Folder
2. Documentation
3. Licensing
4. Special Gift

1.2 Installation Options

To install your brand new Bootstrap theme (that you've already downloaded and un-packed) you have two primary options: FTP or Web Hosting Upload Tools. I strongly recommend to use the first option, because it's easier and more reliable.

1.3 FTP Upload

To manually upload your new Bootstrap theme, login with your credentials to your website and locate your desired folder in your host server. Upload the un-zipped theme folder into the: yourdomain.com/ or yourdomain.com/folder/.

Note: Please ensure you are uploading the un-zipped theme folder, not the entire package downloaded.

1.4 Theme Support

If you have a problem with the theme or found a bug please let me know by send me an email through carlos@alvarez.is and I will do what I can to assist you.

In order to submit me a Support Question, you will need to locate your Theme's Purchase Code, provided by WrapBootstrap.

I tested the theme with major browsers and different devices. Unfortunately it is impossible to run every test scenario. I'll try to keep the theme as healthy as I can.

Note: I am happy to help with setup and any bugs you may stumble upon though I cannot support CSS modifications to your theme.

2. THE HOME PAGE

A quick overlook to understand the theme. HTML & CSS structure and files used.

2.1 Theme Design

This template is really simple to modify, so I am sure you won't have any problem to develop your site. All code is commented and indented to minimize your customization time.

2.2 HTML Structure (code example)

```html
<!-- ==== HEADERWRAP ==== -->
<div id="headerwrap" id="home" name="home">
    <header class="clearfix">
        <h1>D<span class="icon icon-radio-checked"></span>T</h1>
        <p>A Bootstrap 3 One Page Theme.</p>
        <p>Crafted With Love.</p>
    </header>
</div><!-- /headerwrap -->

<!-- ==== GREYWRAP ==== -->
<div id="greywrap">
    <div class="row">
        <div class="col-lg-4 callout">
            <span class="icon icon-stack"></span>
            <h2>Bootstrap 3</h2>
            <p>Dot Theme is powered by Bootstrap 3. The incredible Mobile First Framework
        </div><!-- col-lg-4 -->

        <div class="col-lg-4 callout">
            <span class="icon icon-eye"></span>
            <h2>Retina Ready</h2>
            <p>You can use this theme with your iPhone, iPad or MacBook Pro. This theme is
        </div><!-- col-lg-4 -->

        <div class="col-lg-4 callout">
            <span class="icon icon-heart"></span>
            <h2>Crafted with Love</h2>
            <p>We don't make sites, we craft themes with love & passion. That is our most
        </div><!-- col-lg-4 -->
    </div><!-- row -->
</div><!-- greywrap -->
```

This theme comes only with one HTML file (index.html).

2.3 CSS Structure

FS2 uses 4 global CSS and two more added by Google Fonts. Major theme structure was defined using [Bootstrap 3.](#) Bootstrap.css file was not modified. Basic configuration changes were added to the Main.css file.

```css
/*
 * Author: Carlos Alvarez
 * URL: http://Alvarez.is
 *
 * Project Name: Flat & Scroll 2 - Bootstrap 3 vCard Theme
 * Version: 1.1
 * Date: 09-17-2013
 * URL: http://alvarez.is/demo/fs2/
 */

body {
    padding-top: 50px;
    background-color: #f2f2f2;
      font-family: "Lato";
      font-weight: 300;
      font-size: 16px;
      color: #555;
```

2.4 List of files

HTML

    index.html (Main HTML)

CSS

    Bootstrap.css (theme structure)

   Main.css (theme styles)

    Normalize.css

    Component.css (Menu Configuration)

3. THEME CONFIGURATION

A quick guide to help you with the basic styles of your theme.

3.1 Google Fonts

This theme uses 2 pre-defined Google Fonts, 'Lato' and 'Raleway'. If you want to change this value, you should take two steps.

1 – Modify your HTML linking your desired font. Go to Google Fonts site, choose the font and click the 'Quick Use' link. Then, copy & paste the code in your file.

2 – Change all the references of the defaults fonts with the new ones in your Main.css file.

3.2 IcoMoon

[Icomoon](#) is a free pack of icon fonts that you can use in your project. To use your icons, you should add the class 'icon icon-NAME'. In this theme icons are used in the navigation menu. Component.css contains all the icons used in this theme. Also, you can edit your icons using the file included in the fonts folder: ecoicons.dev.svg to add or remove the desired icons.

3.3 Page Scroll

The page scroll effect is obtained using SmoothScroll.js. To add a scroll effect, create an 'ID' and 'Name' and use this as a section identifier. Add an internal link pointing to the ID.

Usage example:

```
<a href="#about" class="smoothScroll">About</a>
<div class="container" id="about" name="about">
```
(section identifier)

3.4 Portfolio Images

This theme uses the Bootstrap Modal script to show the description of each work. You should configure a Modal for each image if you want to display different information. Also, you can link a modal from different images (Like the example used by the theme).

3.5 Retina Capabilities

The theme includes a retina configuration to display a better quality of images on retina devices. Please, refer to the Javascript section for more information.

4. THE JAVASCRIPT

List of javascripts used. Also a small configuration help for those ones that requires it.

4.1 List of Javascripts

- Jquery.js (Jquery main file)

- Modernizr.custom.js (HTML5 & CSS3 Tool)

- Bootstrap.min.js (Main bootstrap javascript)

- Retina.js (Retina display tool)

- Chart.js (Chart capabilities)

- SmoothScroll.js (Scroll controls)

- gnmenu.js (Menu script)

4.2 Retina.js

This theme was created with support of retina devices. Retina.js script is used to enhance the experience of retina display's users.

The script automatically replaces images on your page with high-resolution variants (If they exists.)

Steps to use it:

1 – Place the retina.js file on your server

2 – Include the script on your page

```
script type="text/javascript" src="/scripts/retina.js" /script
```

3 – Create copies of your images at twice it sizes. Rename this images adding '@2x' at the end of the image.

Normal image (logo.png – 100 x 100 pixels)

Retina image: (logo@2x.png – 200x 200 pixels)

More information [here](.) .

4.3 Chart.js

Chart is an easy script to create your charts. In this theme, each chart configuration is placed in the index.html. Basic style is provided by chart.js. Chart colors and forms are defined in the index.html file. Please, refer to chartsjs.org to detailed information.

5. Files & Sources

To sum it all up, this is dedicated to the theme templates, image files and other sources / credentials for our theme.

5.1 PSD Source

This theme does not includes a PSD file.

5.2 Image Sources

ONCE AGAIN, THANKS.

And as always, I love to hear your feedback… so shoot me a tweet at @Alvrz_is and - if you would - rate this theme over on CreativeMarket. I'd really appreciate it. Cheers!
